Houghton Mifflin Harcourt

Latest Update to All Users from HMH Regarding Flash Usage and Support

October 2, 2018

HMH continues to update our Flash-based Intervention programs to HTML5 in response to Adobe's announcement that it will discontinue Flash by 2020.

Phonics Inventory, Reading Counts! and the Next Generation Dashboards have all been upgraded to HTML5 and are now available, joining the HTML5 versions of *READ 180* Universal, *Do The Math, English 3D, Reading Inventory*, and *Math Inventory*.

The HTML5 version of the Interactive Teaching System (ITS) is scheduled to be available in October. The HTML5 versions of *System 44* Next Generation and Student Achievement Manager (SAM) are scheduled to release in December.

Until these updated application releases, users may see notices in their browsers asking to allow access to Flash. They should accept these requests. The conversion to HTML5 should be transparent to users and require no additional steps for hosted customers. Local customers will need to download the updates from the Product Support website.
