Crosswalk to the <i>Osmo™ Numbers Game</i>	ix

ACTIVITIES

Activity 1	K	• Use Objects to Model Numbers.	1
Activity 2	K	• Compare Two Numbers	2
Activity 3	K	• Compare Groups of Objects	3
Activity 4	K	• Count Groups up to 6.	4
Activity 5	K	• Relate Objects and Numbers.	5
Activity 6	K	• Make Numbers with 5-Groups	6
Activity 7	K/1	• Count by Ones from a Given Number	7
Activity 8	K/1	• Count by Ones	8
Activity 9	1/2	• Counting Patterns	9
Activity 10	1/2	• Use Symbols to Compare Sets	10
Activity 11	1/2	• Use Symbols to Compare	11
Activity 12	3/4	• Compare and Order Whole Numbers	13
Activity 13	K/1	• Put Together to Add.	14
Activity 14	K/1	• Find the Unknown Partner	15
Activity 15	K/1	• Decompose Numbers within 10	16
Activity 16	K/1	• Find Partners of 10.	17
Activity 17	K/1	• Represent Numbers as Tens and Ones	18
Activity 18	1/2	• 10 Less or 10 More	19
Activity 19	2/3	• Even and Odd Numbers	20
Activity 20	3/4	• Addition Number Patterns	21
Activity 21	1/2	• Use Doubles to Add	22
Activity 22	1/2	• Use Doubles Plus 1 to Add	23
Activity 23	1/2	• Make a Ten Strategy.	24
Activity 24	K/1	• Take Away to Subtract	25
Activity 25	K/1	• Write Subtraction Equations.	26
Activity 26	1/2	• Compare to Subtract	27
Activity 27	1	• Addition and Subtraction.	28
Activity 28	1/2	• Think Addition to Subtract.	29
Activity 29	1/2	• Relate Addition and Subtraction.	31
Activity 30	2	• Model Repeated Addition with Arrays	33
Activity 31	1	• Make a Ten to Add.	34
Activity 32	2/3	• Make New Tens to Add	35
Activity 33	1/2	• Model Tens and Ones to Add	37
Activity 34	1/2	• Add Two 1- or 2-Digit Numbers	39
Activity 35	2	• Write 2-Digit Numbers in Expanded Form.	40

Activity 36	2/3	• Strategies for 2-Digit Addition	41
Activity 37	2/3	• Add Two 2-Digit Numbers	42
Activity 38	3/4	• Use Mental Math to Find Totals	44
Activity 39	2/3	• Add Four 2-Digit Numbers	46
Activity 40	3/4	• Round to Any Place	48
Activity 41	3/4	• Add with 3-Digit Numbers	49
Activity 42	2	• Model Ungrouping for Subtraction.	51
Activity 43	3	• Relate Repeated Additions and Multiplication Equations.	52
Activity 44	3	• Count by Equal Groups on a Number Line.	53
Activity 45	3/4	• Model with Arrays	54
Activity 46	3	• Multiply with 2, 3, 4, 5, and 6	56
Activity 47	3/4	• Identify Multiples of 3	58
Activity 48	3/4	• Use Properties to Multiply	59
Activity 49	3	• Multiplication Number Patterns	60
Activity 50	3	• Find Unknown Factors	62
Activity 51	3/4	• Use Equal Groups to Divide	64
Activity 52	3/4	• Use Multiplication to Divide	66
Activity 53	2	• Make Money Collections	68
Activity 54	3/4	• Elapsed Time	69
Activity 55	1/2	• Measure Length	70
Activity 56	3/4	• Perimeter.	71
Activity 57	K	• Classify and Count by Color	72
Activity 58	1	• Use 5-Groups to Record Data	73
Activity 59	2/3	• Make a Bar Graph	74
Activity 60	3/4	• Record Data on a Line Plot	76

Count by Ones

Activity Plans tie Osmo™ game experiences to the content of specific Math Expressions lessons.

GRADES

K/1

Use with Grade K Quick Practice and Lessons 5.5 and 5.13 or Grade 1 Quick Practice and Lessons 1.4 and 1.5.

ENVIRONMENT

pairs

MATERIALS

two-color counters
 Secret Code Cards
 Counting Chart 1–30 workmat

OSMO™ NUMBERS

Add *Level 9* (numbers 3–10),
Level 10 (numbers 6–13),
Level 11 (numbers 9–16), and
Level 16 (numbers 15–30)

OBJECTIVE

Count by ones.

CCSSM

K.CC.A.1, K.CC.A.2, 1.NBT.A.1
 Mathematical Practices:
 MP2, MP7, MP8

Activity 8

Set up the Osmo station with two-color counters, Secret Code Cards, and the Counting Chart 1–30 workmat out of Osmo's view.

To begin the activity, the first child views the Osmo screen to choose a poppable number. That child then places a counter over the poppable number on the Counting Chart 1–30 workmat. The second child identifies the covered number. If correct, he or she uses the Secret Code Cards to make the number and places the cards in front of Osmo to pop the number. For example, the first child chooses 15 as the poppable number and places a counter over 15 on the workmat. The second child identifies 15, uses the 10 and 5 Secret Code Cards to make 15, and places 15 in front of Osmo to pop the number 15 bubble.

- Show children the Counting Chart 1–30 workmat. Have them use the workmat to take turns as they count from 1 to 30.
- Make sure children understand how to make numbers using the Secret Code Cards. Have them make numbers such as 11 or 29.

How to Play

1. Locate the **Add** section and choose *Level 11: Watermelon Sea*. Provide each pair with a copy of the Counting Chart 1–30 workmat.
2. The first child hides the Osmo screen from the second child, secretly views it, and chooses a poppable number. He or she then places a two-color counter over the poppable number on the Counting Chart 1–30 workmat.
3. The second child identifies the number covered by the counter. If correct, he or she uses Secret Code Cards to make the number. He or she places the cards in front of Osmo to pop the number.
4. If the second child does not identify the correct number, the first child reveals the number.
5. The two children switch roles and start a new round. The activity ends when each child has played at least five rounds in each role.

Activity Options

- For Grade K children who may struggle, start with *Level 9* and gradually progress to *Level 11*.
- Challenge Grade K to use *Level 16*. To make the activity more challenging, the first child covers two poppable numbers with counters. If the second child gets both numbers correct, he or she can pop both numbers.
- For Grade 1, use *Level 16* as a review activity. Have the first child cover 3 or more numbers. If the second child gets all of the numbers correct, he or she can pop all of the covered numbers.

Activities help students build fluency and mathematical reasoning skills in a game-like environment.

GRADES

3/4

Use with Grade 3 Lessons 5.1, 5.2, and 5.5 or Grade 4 Lessons 5.6, 5.7, and 5.8.

ENVIRONMENT

pairs

MATERIALS

number tiles
Perimeter workmat
Fish Box worksheet

OSMO™ NUMBERS

Add Level 14 (numbers 12–26, even)

OBJECTIVE

Find pairs of numbers to represent side lengths of a rectangle when the perimeter is known.

CCSSM

3.MD.D.8, 4.MD.A.3
Mathematical Practices:
MP1, MP4, MP7

Perimeter

Activity 56

Set up the Osmo station with the Perimeter workmat and number tiles out of Osmo's view.

To play this activity, students will use the Perimeter workmat to model the lengths of the sides of a rectangle having a perimeter equal to one of the poppable numbers. For example, to pop the number 18 bubble, students may place number 8 tiles on opposite sides of the rectangle and place number 1 tiles on the two remaining opposite sides.

- Before beginning the activity, review the characteristics of a rectangle. If necessary, remind students that the opposite sides of a rectangle are the same length.
- Show students the Perimeter workmat. Tell students that the rectangle represents a box to hold fish. Explain that in this activity, students will place number tiles on the sides of the fish box to represent the lengths of the sides. The total perimeter of the rectangle must be equal to a poppable number. Remind students that the rectangle on the Perimeter workmat helps them visualize the problem and that the lengths of its sides may not be in exact proportion for the poppable number.

How to Play

1. Locate the **Add** section and begin by choosing *Level 14: Sausage Shelf*. Provide each student with a copy of the Fish Box worksheet.
2. The player chooses a poppable number to pop. Away from Osmo's view, the player places number tiles on the Perimeter workmat to represent the lengths of the sides of the fish box. The player checks to make sure opposite sides are the same length and the total of the four numbers is equal to the chosen poppable number. Then the player slides the workmat into Osmo's view.
3. If the chosen number pops, the player records the perimeter and side lengths on the worksheet. If the chosen number does not pop, the player and partner compare the number tiles to the chosen number and, outside of Osmo's view, replace number tiles as needed to make the chosen number. If the chosen number pops when the player slides the workmat back into Osmo's view, the player records the perimeter and side lengths on the worksheet. If the chosen number does not pop on the second attempt, the perimeter is not recorded.
4. Students take turns as the player and partner. Play continues until each student has recorded ten different results. If needed, students can restart the level.

Activity Options

- While students are playing, ask them to think about how dividing the poppable number by 2 could help them find side lengths for the fish box. Students may recognize that half of the perimeter is equal to the total of two of the adjacent sides. For example, if the poppable number is 26, the total of the length and width of the rectangle is 13. Knowing this, students can use any number pair with a total of 13 for the two different side lengths.

Name _____

Dot Bubble Pop

Use circles and 5-groups to record.

Dot Tiles Used to Pop Bubbles		Total
 5-dot		
 2-dot		
 1-dot		

Workmats are used by students to interact with Secret Code Cards, Counters, Osmo Number Tiles, and the Osmo Device.

INCLUDES

- **Activity Plans** that integrate Osmo Numbers with *Math Expressions* instruction
- **Worksheets** for recording answers and organizing work
- **Workmats** for using manipulatives, such as Secret Code Cards and Osmo tiles
- **Correlations** to *Math Expressions* © 2013, *California Math Expressions* © 2015, and *Math Expressions* © 2018
